

CLAUDE FOR EVERYONE • SYDNEY

The Master Resume — and Other Survival Tools

How I used Claude to land a new job — and hit the ground running.

Mel Paisley @techwritingwitch - Education Content @ Relevance AI

ACT ONE

The Job Hunt

STEP ONE

Ask Claude to build the V1.0 Master Resume

Example prompt:

Role: You are an expert executive resume writer and career strategist.

Task: Analyze the provided background materials and construct an exhaustive, comprehensive master resume (master-resume.md). The goal is a "kitchen sink" document containing maximum detail, metrics, and project scope, which will be tailored for specific applications later.

Inputs provided:

- [Attach your LinkedIn PDF export]

Execution instructions:

1. Synthesize & expand: merge the LinkedIn data with any publicly available technical contributions, repositories, and writing you have online.
2. Maximize detail: under each role, break down achievements into sub-categories (e.g. Tech Stack, Core Projects, Leadership). Do not optimise for brevity; optimise for completeness.
3. Adhere to voice: strict compliance with my-voice.md is mandatory.
4. Format: output in clean, highly organised Markdown.

Clarification guardrail: if any critical technical details, metrics, or context are ambiguous or missing, do not invent them. Flag them or ask me directly at the end of your response.

THE AUDIT

It looked great but it was wrong in a dozen ways.

*For example - one Python project on my public GitHub → “strong Python developer.”
In an interview, that would have been a disaster.*

The banned-words and phrases list

Single words: delve, leverage, facilitate, underscore, tapestry, navigate, curate, robust, seamless, holistic, elevate, empower, game-changer, cutting-edge, innovative, transformative, spearhead, synergy, impactful

Phrases: "plays a crucial role", "plays a vital role", "it is important to note", "it is worth noting", "in today's fast-paced world", "in the realm of", "when it comes to", "at the end of the day", "proven track record", "strong communication skills", "results-driven", "passionate team player", "go-to person", "think outside the box"

Structural tells: "Not just X – Y." / "No X. No Y. Just Z." / "Picture this..." / hollow rhetorical questions followed by a generic answer

/tailor-resume — a skill, not a prompt

- Reads master-resume.md (source of truth — won't invent, it flags gaps)
- Reads my-voice.md (your writing style + a banned-words list of AI tells)
- Asks what to emphasise, and what to downplay, before writing anything
- Outputs a tailored resume and an interview prep file

FOLLOW THROUGH

/interview-debrief

- After each round: what came up, what you learned, what to strengthen
- Appends a dated section to your interview prep file

Interview Debrief

Run a structured debrief after an interview, then update the interview prep file for the next round.

Usage

```
/interview-debrief [company]-[role-slug]
```

For example: `/interview-debrief relevance-ai-technical-writer`

Steps

1. Load context

Read `output/[company]-[role-slug]-interview-prep.md`. This is the source of truth for this application — you'll be adding to it, not replacing anything.

If the file doesn't exist, tell the user and stop.

2. Run the debrief conversationally

Work through the following topics one at a time. Ask each question, wait for the answer, then move to the next. Don't present them all at once.

Questions asked in the interview

- Which questions from the prep file actually came up?
- Were there any questions you weren't expecting? Ask the user to describe them.
- Were there any questions you felt you answered well? Any you'd want to handle differently?

What you learned about the role

- Did you get any new information about the role, the team, or how the company operates?

Ask Claude to attack your application

“You’re a sceptical hiring manager.

What would make you put this in the no pile?”

Ask Claude what to expect from the application process

“I’m applying for <Role> at <Company>, research what I should expect from the hiring process”

Ask Claude about your responses to questions

“you’re a recruiter at <place> for <role>, please use the questions in <interview-prep-file> to ask me questions that might come up in the interview, and then give me honest critical feedback on my responses.”

ACT TWO

Hitting the Ground Running

WEEK ONE

Your first week

Notion. Slack. Linear. Old decks. People whose names you can't remember yet.

- *Connect Claude Code via MCP connectors.*
- *Ask Claude to review your first week / month / quarter plan and come up with a strategy to meet it.*

Ask questions privately first

As a new starter I hesitated to ask basic things in front of the team, but lacked the familiarity to know where to find answers.

Claude provided a safe place to ask questions and find answers - sometimes they were great, other times they provided a starting place to seek clarification from my colleagues.

Synthesis across sources

“Read these 10 Linear issues, this Notion page, and last quarter’s planning deck — what are the recurring customer pain points?”

Final Tips for Success

Claude is the tool. You're still the applicant.

- Claude built the resume, but humans will ultimately get you the job
- Claude doesn't care whether you get the job. That part is still on you
- The audit only catches the mistakes you're paying attention to
- Interview prep is really important - and Claude is a great tool there

Thank you
